

HW3

CSC 675/775

Krunal Shah

For this Assignment, I have created a java program named Music_Store.java.

To Run this program you will have to:

1. First you will need to compile the file in terminal or command prompt using the command: `javac Music_Store.java`
2. After that you will have to run the file using : `java -classpath ".:sqlite-jdbc-3.21.0.jar" Music_Store`

I have been doing this on MAC and so the commands might differ in other OS.

Also all the files needed for the execution would be in the zip file which I have uploaded to iLearn.
